

MediTropin®

Nutritional support
to maintain healthy
hormone function.*

Alternative protocol

Take one MediTropin® effervescent sachet in the morning 30 minutes before breakfast and two at bedtime two to three hours after the last meal.

We recommend that you take MediTropin for a full three months before assessing your results. After the first three month regimen, skip one month and then repeat cycle.

MediTropin®

Spark the fuel
that fuels your fire.™*

ACHIEVE

Live well. Face every day and every challenge with the energy and vitality to achieve your goals. With MediTropin®, you'll put your body back on the fast-track with its amino acid-rich formula designed to get your hormonal system humming.

Support endocrine (hormone) system*

Your hormones are the bits and bytes of your body's information technology system, defining and determining the way your body operates. As messenger molecules, hormones help to regulate basic functions such as growth, development and reproduction. To stay productive, the endocrine system depends on a steady diet of nutritional amino acids. MediTropin® is formulated to nourish your body with the amino acids specifically targeted to keep your endocrine system working hard to keep you going strong.*

Maintain metabolic function*

Amino acids also play a key role in maintaining metabolic function—both for your body's total metabolism and for the specific metabolic processes within individual cells. Broken down into sequences of enzymatic steps known as metabolic pathways, metabolism is the process through which amino acids (and other substances) are transformed into the chemical compounds that control circulatory and cardiovascular health, tissue remodeling, and normal growth and development. Amino acids such as arginine, glutamine and lysine, key ingredients in MediTropin, are vital to maintaining the integrity and health of the entire metabolic process.*

Recommended by physicians*

From the National Institutes of Health to your neighbor down the street, everyone is interested in aging—what it is, how it works and how best to deal with it. Scientists know that there's no way to stop the clock or turn back time. But they all agree that there are simple steps to take to help maintain youthful vitality well into your older years. Exercise, diet and a positive attitude all directly impact quality of life at every stage. And many doctors recommend making MediTropin a part of your nutritional regimen. It is targeted nourishment to keep the fires of youth burning strong—no matter where you are on life's journey.*

Designed to help keep your endocrine and metabolic processes running smoothly, MediTropin is serious nutrition that will help:

- support endocrine function*
- support protein biosynthesis and muscle protein synthesis*
- invigorate your mind by promoting neurotransmitter function*
- rejuvenate and rebuild structural tissue with energy for skeletal muscle activity*
- nourish your cells by supporting endothelial function*
- maintain whole-body homeostasis*

Directions

Dissolve the prescribed dose of two or three MediTropin effervescent sachets in six to eight ounces of water. Let MediTropin fully dissolve. Once fully dissolved, stir and drink immediately. It is best to take MediTropin at bedtime two to three hours after the last meal. Take for five days and skip two days. Repeat cycle.
